WELCOME

"We can make our plans, but the final outcome is in God's hands."

-Proverbs 16:1

307-850-2514 • 307-850-2053

Box 66 • Boulder, WY 82923
Box 1445 • Riverton, WY 82501

Greetings Cattlemen,

Welcome to the 22nd annual "Cowboy Bulls" production sale. We are experiencing exciting times at Lucky 7 Angus. It seems like almost every day we hear another success story. Our genetics are dominating on the ranch for profitability, dominating at the feedlot for cost of gain and feed conversion, at the very top for carcass quality, and now the first to be labeled Environmentally Friendly Beef. (see pg. 39)

When you head off in a direction different than the herd (as we took the high trail-away from the typical glass bubble seedstock producers), you don't know if it will lead to greener pastures or off a cliff! First it was PAP testing with minimum standards, introducing a 4 yr guarantee, and feed efficiency testing, now we are working on tenderness testing, right heart failure in the feedlot, and a project that will have Millennials wanting to buy Lucky 7 Angus Beef at higher prices. (The branding of Environmentally Friendly Beef!) We have built the most advanced bull development facility in the world. Big pastures with rocks and terrain to develop better feet and legs, all designed to make a better bull and you more money! I can't understand how a fat pretty feedlot bull with haircut and feet trimmed makes commercial ranchers money, which is why you will not see bulls like that here! After years of trailblazing, I can tell you the results have proven that we have made it to greener pastures.

All bulls in this sale carry scientifically proven feed efficient genetics. 3, 4, 5, 6 and even 7 generations deep. Every bull should be in the top 15% of the beef industry for feed efficiency. The ONLY proven feed efficient PAP tested bulls to sell in the USA! Lucky 7 Angus does not just talk feed efficiency like the rest, we scientifically prove it. We have over 20 years of testing by using systematic measures and by using the "GrowSafe" feed efficiency test system. With extensive genetic research, we have located and produce bulls that are making people more money.

Lucky 7 Angus easily has the most accurate PAP in the Angus breed. Not only that but the Lucky 7 Angus cows live above 7000 feet for 8 months of the year and all females spend one summer above 10,000 feet. Lucky 7 Angus is a True High Elevation program. We do not just PAP test to sell bulls!

As per the depth of quality, this year's bulls are second to none for phenotype and quality. There will be bulls clear to the end that could make any registered outfit better. Just a few are lots 296, 305, 306 & 309. It is easily the best set of bulls to date, and arguably the best depth of quality to sell anywhere in the USA this year. Not only that but they will eat a lot less than my competitors.

Every bull selling has a momma that is being fed less today than any cows we have ever raised. Both he and his mom have been in tougher, more real-world conditions, than any other bulls selling. The 2-year-old and fall bulls were summered on big pastures at 7589 feet. Then they were developed in 25-75 acre pastures on a high roughage ration to make better feet and legs. These bulls are durable, range ready, and sell with the "Nations Only 4 Year Guarantee" to prove it! Bulls raised right!

We know there are many choices for you as to where you buy bulls. We respect that and are extremely blessed when you choose our program. Our warmest welcome goes out to you and your families. If we can be of assistance, don't hesitate to ask.

Thanks and may God bless you, Lucky 7 Angus

LUCKY 7 ANGUS

Where tougher conditions, and higher testing standards make better bulls!!!

22nd Annual "Cowboy Bulls" Production Sale

Saturday, March 6, 2021

Riverton Livestock Auction • Riverton, Wyoming

12:00noon • Lunch Provided by Riverton Cow-Belles

SALE DAY PHONES

307-850-2514 or 307-850-2053

SIGHT UNSEEN PURCHASE GUARANTEE

Buyers unable to attend the sale may call or send their bids to any of the special representatives listed. All cattle come with a Satisfaction Guarantee.

ACCOMMODATIONS

Sundowner Motel, 307-856-6503 or 1-800-874-1116
616 North Federal Blvd., Riverton, WY
Sale Headquarters. Ask for Lucky 7 Angus rates!!

PAP TESTING

All PAP scores on 2 yr old and fall bulls were taken at 7,580ft and yearlings at 7,075ft elevation after over 90 days exposure by Dr. Tim Holt. For further PAP information see page 6.

FEED EFFICIENCY

Many of the bulls in the sale went through the GrowSafe test system. Of the bulls tested, the top 50% will be shown under their footnotes. A feed efficiency evaluation score will be added in the footnotes as an additional reference for your convenience. See page 20 for details.

LUCKY 7 FOUR YEAR BULL GUARANTEE

See our bull guarantee program on Page 22.

SALE LOCATION

Riverton Livestock Auction, 1490 South 8th Street East

INSPECTION

Cattle are available any time at the ranch and will be at the Riverton Livestock Auction March 5, 2021.

DELIVERY

Free delivery first 300 miles on purchases of \$3000 or more. All other delivery at cost.

FERTILITY

All bulls will be fertility tested within 3 weeks prior to sale. This will guarantee all bulls selling to be fertile and satisfactory breeders at time of sale. (Some breeders do not have bulls fertility tested before the sale, but it is mandatory at Lucky 7 Angus to meet our high standards.)

ULTRASOUND AND CARCASS DATA

Ultrasound carcass and fertility test information will be available at the sale.

BULLS SELL IN WORKING CLOTHES

The bulls in this sale have been on a high roughage low energy ration. They will not be as fat as at most sales. Overfeeding bulls causes permanent fertility problems. Bulls fed as these are, will simply breed more cows.

TERMS & CONDITIONS

CASH. Cattle sell under the Terms and Conditions of the American Angus Association..

Announcements from the block take precedence over any printed matter.

References: American Angus Association®, AHIR®, Angus Source®, CAB®, Pathfinder®. EPDs current as of January 28, 2021. Updated EPDs can be viewed at www.angus.org.

HOW TO MAKE FEED EFFICIENCY WORK FOR YOU.

What is Residual Feed Intake (RFI)?

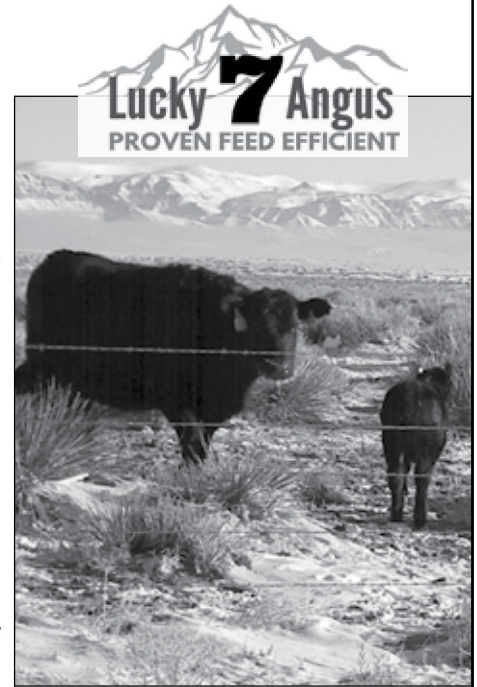

Residual Feed Intake (RFI) is the difference between an animal's actual feed intake and its expected requirements for maintenance and growth. RFI is independent of body weight and size. Differences in the trait cannot be detected by physically looking at an animal, it requires accurate and simultaneous measurement of an animal's feed intake and body weight. Animals with negative RFI values are more efficient than those with higher RFI values.

How does one select for feed efficiency?

By selecting for RFI, or introducing several low RFI bulls into your herd, feed-related savings will continue to increase. Several years of genetic selection will improve the baseline feed efficiency of the ranch and savings will continue to transfer to the cow herd as replacement heifers are retained.

What is the heritability of RFI?

RFI is a moderately heritable trait, and when used as a selection tool, will result in progeny that consume less feed for the same level of production. RFI is independent of growth, body size and other performance traits, meaning that selecting for animals with low RFI will improve the feed efficiency of one's herd without compromising body size or growth.

Can't make it to the sale?

PARTICIPATE AS AN ABSENTEE BUYER...

The sale will be broadcast via satellite on Dish Network channel 997. Please note that there is a delay if you are not at the sale in real-time. The sale will also be broadcast live on the internet at both www.superiorlivestock.com and www.superiorclicktobid.com.

Click-To-Bid. This is Superior's online bidding program for cattle buying. **Please note that high speed internet is required – this is not for dial-up or satellite internet.** Registration is free, but you must become a member of www.superiorclicktobid.com to sign up.

Turn in Bids Over the Phone. This is the traditional method of buying livestock and is the suggested process for anyone who does not have consistent, high-speed internet. To get started simply go online to www.superiorlivestock.com and Register for a Buyer Number days prior to the sale.

IF YOU NEED ANY ASSISTANCE CALL SUPERIOR AT (800) 422-2117

TENDERNESS TESTING

For the past 3 years we have been tenderness testing bulls using cutting edge technology that is in most cases more sophisticated than human medical equipment. It measures the muscle bundles, which is directly associated with tenderness. Just one more tool we believe could make our customers more money in the future. (Very few seedstock producers can offer this) They are scored from 1-5. Only the elite 2-year old's that were located as a #1, or Extremely Tender will be notated in footnotes. Yearling and fall bulls will have data in supplemental sheet prior to the sale.

2 Year olds and Fall bulls were PAP tested at **7,580** feet, and Yearlings at **7,075** feet after **93** days exposure.

“PAP RISK CATEGORY EVALUATION”

This information was performed in a consultation with Dr. Tim Holt, DVM, after PAP testing and all variables were known.

5 Star ♥♥♥♥♥ Low Risk Cattle:

These are cattle that have been PAP measured and have found to be at LOW risk for developing or carrying the gene combination for true Bovine High Mountain Disease. This group of cattle is suitable for use at any elevation.

4 Star ♥♥♥♥ Moderate Risk Cattle:

These are cattle that have been PAP measured and have found to be at a MODERATE risk for developing or carrying the gene combination for true Bovine High Mountain Disease. This group of cattle is suitable for use at the elevation of testing and below. (PAP test was performed at 7,580 feet on all Two year olds & Fall bulls. The Yearlings were PAP tested at 7,075 feet.)

3 Star ♥♥♥ Unknown Risk Cattle:

These are cattle that a PAP test was unable to be performed, or cattle PAP tested at less than one year of age with a PAP score of 46-49mmhg. This group of cattle can change, as per risk category, up or down and therefore it is advised that they be retested when they are acclimated to their new home.

Not Recommended at Elevations Above 6,000 feet

Dr. Holt PAP testing above 7,000 feet

DEFINING A RISK CATEGORY:

The PAP Risk Category Evaluation is being developed to add to the repeatability and dependability of a PAP measurement. The PAP score measurement in and by itself is a meaningless number without knowing the age, size, elevation, length of exposure to that elevation, environmental conditions, Systolic and Diastolic pressures. By adding to the PAP score, a risk category, the buyer can make a better selection for use in high elevation. All animals in each risk category have nearly the same statistical chance of developing or carrying the gene combination for true High Mountain Disease. The PAP test is not 100% in any fashion but it is an indicator of pulmonary hypertension in that animal. Each animal tested will be given a risk category rating following the test and evaluation of the variables mentioned above. This information and scoring was 100% done in consultation with Dr. Tim Holt, DVM.

(Lucky 7 Angus will guarantee all bulls selling in this catalog for High Mountain/Brisket Disease up to 6,000 feet elevation and all Low to Moderate Risk bulls up to the corresponding elevation of the PAP Risk Scoring Category Evaluation.)

♥♥♥♥♥♥♥♥♥♥ A PAP test performed at 5,500 feet and below will locate less than 60% of the animals carrying the gene combination for true Bovine High Mountain Disease in elevations above 7,000 feet. This information has been proven at Lucky 7 Angus by testing, research and data.♥♥♥♥♥♥♥♥♥♥

LUCKY 7 ANGUS IS A TRUE PAP/HIGH ELEVATION PROGRAM!

PAP testing is only one tool to help prevent high elevation or Brisket disease. If it is performed correctly, above 6,400 feet and more than 42 days exposure, it is somewhat effective. It becomes a much better tool if it is performed above 7,200 feet with a minimum of 75 days exposure. For ranchers above 6800 feet no PAP Test will ensure a bull to not escalate the disease. The genetic base or cow herd of the bull must acclimate to high elevations as well. Meaning they must live above 6,800 feet year round, or be above 7,000 feet more than 6 months per year including during key stress periods (through fall and cold parts of winter). This has been proven at Lucky 7 Angus and confirmed by Dr. Tim Holt. All Lucky 7 Angus cows run above 7,000 feet for 8 months and through the coldest part of winter (early May into January). All fall and 2 year old bulls are PAP tested at 7,580 feet after a 93 day exposure.

Yearling Bulls - Lots 1-65

Every Yearling bull is out of a first calf heifer. This very well could be the most powerful bulls out of first calf heifers to sell anywhere in the world! We believe around half of them to be true Herd Bull prospects that could advance any seedstock program.

Fall Bulls – Lots 66-88

All 23 fall-calved bulls were born on our Oklahoma ranch. They were brought to Daniel, Wy early June where they ran in high elevation pastures with the rest of our 2-year-old bulls. They were PAP tested at 7589 feet. These bulls are out of the top end of the Lucky Angus cows and many are embryos from our elite genetics. Once weaned, they go through the same rigorous testing as the rest of our bulls. The weaning weights are a bit lower as we have been on a southern learning curve and their nutrient requirements were not always met. Their Momma's have been through more difficult conditions than any cows we own. Make no doubt about it, they are some of the best bulls in this sale.

Retaining 1/3 Semen Interest. An embryo calf out of 3251, one of the easiest fleshing cows in the breed with a picture perfect udder. Lucky 7 Angus has kept 4 herd bulls out of this superstar matron. Dam BR 7-94, NR 7-107, YR 7-106 Yearling & IMF Ratio 14-116.

FEED EFFICIENCY

About 70% of the bulls went through the “GrowSafe” feed efficiency test system. Of the bulls tested the top 50% will be shown under their footnotes. This data has been calculated into a RFI score. (Residual Feed Intake) The lower the RFI score or more negative, the better the feed efficiency. We also notate animals with exceptional feed conversions, as per ration, another measure of feed efficiency. All bulls in this sale will be at the top of the industry for feed efficiency. Dr. Kerley with the University of Missouri has studied our data and determined Lucky 7 genetics to be 15-30% more efficient than average. In feedlots, with over 3500 animals fed out, Lucky 7 Angus genetics have been in the top 1-15% for feed efficiency in every pen. Lucky 7 cows are maintaining on diets 30-45% less than nutritional guidelines have determined necessary.

68% of the cost of raising a cow is associated with feed. This fact alone is proof that feed efficiency in cattle has the greatest economic impact on any ranch. Interesting data on dairy cows has shown, if a cow is proven to be (10%) more feed efficient, she will produce (10%) more milk on the same ration as an average feed efficient dairy cow and when not in production eat (10%) less. This directly correlates with what we see here at Lucky 7 Angus as well.

Feed efficiency testing growing cattle in a feedlot may not locate the cattle efficient on your ranch. Only by testing the cowherd too can you guarantee feed efficiency both at your ranch and in the feedlot. Lucky 7 Angus has also proven feed efficiency in our cowherd by limit feeding them using big vertical mixers for the past 15 years. Every bite they eat is weighed. We know how much they require this year, last year, and 15 years ago. No other seed stock producer has this advantage.

FEED EFFICIENCY SCORING SYSTEM

Lucky 7 Angus has been feed efficiency testing our cow herd since the early 2000's. In 2009 we purchased a “GrowSafe” Feed Intake Monitoring System to have infinitely more feed efficiency testing and data. For the past 10 years we have relentlessly researched and studied feed efficient pedigrees. Our knowledge is second to none in this field. Lucky 7 Angus has the highest accuracy or R squared number in the “GrowSafe” data base. Even with the most accurate data, many variables can change the RFI score and give you a false prediction. That is why it is impossible to determine with any RFI numbers the true feed efficient animals. Our customers have asked for an easier and more reliable tool. We have implemented a Feed Efficiency Evaluation Score to predict the probability on every bull selling. This score is calculated by using scientific, statistical and analytical data derived from test results, parentage and other variable factors. For a total of +100 to a -100, with zero being an average animal. (See below) This is the same method Lucky 7 Angus uses to discover true scientific Feed Efficiency in cattle. This scoring system will add to the predictability of an animal passing feed efficient genetics.

Any animal of +50 and above we estimate to be in the top 10 to 20% of the breed.

+100	Extremely Feed Efficient
+50	Very Efficient (Top 15 – 20% of the breed)
0	Average of Breed
-50	Inefficient
-100	Extremely Inefficient

**You can't talk a trait
unless you can prove it!**

LUCKY 7 ANGUS "NO BULL SHIT" 4 YEAR GUARANTEE

All bulls selling over \$3,500 in the March 6, 2021 sale will be guaranteed against injury that renders them incapable of breeding, or to be a potential breeder except those specifically listed below. How much more could you pay for a bull knowing he would last 4 years? And how much better could you manage your budget and your genetics? Knowing the average longevity of bulls from most breeders, this could easily be worth \$1500/bull or more. As the industry leader, breeding and raising bulls capable of holding up, lasting longer and taking tougher conditions, it is fitting that Lucky 7 Angus is the first to raise the bar and offer a 4 year guarantee. We hope that others who claim to have bulls which can do the same will step up to the plate.

This guarantee only applies to original purchaser and shall not apply to any bull which has not been maintained by original purchaser at all times and for normal breeding practices and in normal breeding conditions. This guarantee only applies to bulls which are maintained at all times in accordance with rules and practices of good animal husbandry and management.

Claims shall be resolved as follows: Bulls purchase price up to \$8500 less salvage value (\$1200.00 minimum) shall be credited to the purchaser toward purchase of (1) bull at following Lucky 7 Angus Bull sale. The credited purchase price decreases by 25% per year, after turn out to cows, or July 1st, whichever is earlier. All Credits due must be used In first proceeding Lucky 7 Angus bull sale following injury, or will become void. Original purchaser must contact Lucky 7 Angus within 14 days of discovery of injury and have licensed veterinarian's verification. Lucky 7 Angus retains the right to use an agent of their choice for all verifications. If any claims are denied by Lucky 7 Angus, purchaser must respond with written legal explanation describing why guarantee should apply, or lose any guarantee available on bulls.

Exceptions: Injuries or loss caused by motor vehicles, equipment, or trains; injury or loss caused by acts of nature/God including but not limited to: lightning, tornadoes, blizzards, freezing cold, fires, drowning; injury or loss from disease, feed intake or poisoning, any human caused injury or loss, including but not limited to: nuclear, radioactive, contamination, war, invasion, acts of terrorism; confiscation, quarantine, theft; malicious or willful injury to animal, injury or loss caused by carelessness, neglect; failure to maintain good animal husbandry and management; any injury or loss caused by predation.

ENVIRONMENTALLY FRIENDLY BEEF

Yes, I said Environmentally Friendly Beef. Lucky 7 Angus has launched Environmentally Friendly Beef and is in the process of trying to get the name branded. We were hesitant to use this name as we thought it may be seen as negative to some of our buyers. But the facts are that we live in the 21st century and at least half the consumers of beef believe and want environmentally friendly.

FACT #1: We have documentation that proves Lucky 7 Angus genetics are proven feed efficient. Cattle that eat less will omit less greenhouse gas and create a lower carbon footprint per pound of beef.

FACT #2: Because of our high elevation PAP test, and the toughness we breed into our cattle there is less sickness and death loss. Less need for antibiotics and better animal husbandry. I know for a fact the millennials will look positive towards Environmentally Friendly Beef and the data is on our side. The environmental movement is real and many beef eaters believe in it, which will create a great selling opportunity for our customer's that have 100% Lucky 7 Angus genetics.

"Environmentally Friendly Beef. The best tasting most nutritious protein on earth."

Thank you for coming to the sale!

We have built the most advanced bull development facility in the world. Big pastures with rocks and terrain to develop better feet and legs.

TILL WE MEET AGAIN

*"The Lord himself goes before you and will be with you,
He will never leave you nor forsake you. Do not be afraid, do not be discouraged."*

-Isaiah 58-11

NOTES

A Lucky 7 Angus first calf heifer with her calf.

Feed efficiency at high elevation never looked so good!
